Introduction

The existing Shiva Textiles website currently provides only basic business information such as product categories and contact details. To improve user experience and make the website more interactive, several enhancements are proposed. These include adding product search functionality, filters based on price and cloth material, and improving the visual design by removing unnecessary background elements. Additionally, informational sections such as *About Us* and detailed *Branch Locations* will be incorporated into the Contact Us page. These enhancements aim to make the website more user-friendly, informative, and aligned with modern retail website standards.

Project description

This project focuses on enhancing the existing Shiva Textiles website by introducing new functional and informational features. The enhancement includes implementing a product search option and filters based on cost and fabric material to help users easily find relevant products. Visual improvements such as background removal will be done to create a clean and professional appearance. The Contact Us page will be expanded to include an About Us section that explains the company's background and values. Additionally, all branch locations where Shiva Textiles stores are present will be listed clearly for customer convenience. The overall goal of the project is to improve usability, accessibility, and customer engagement.

Project Scope

3.1 Scope Definition

The scope of this project defines the features and improvements that will be implemented as part of the website enhancement. It outlines what functionalities are included and clearly specifies the limitations of the current phase to avoid scope creep.

3.2 In-Scope

The following features are included within the scope of this project:

- Adding a search functionality to find products easily
- Implementing filter options based on cost and cloth material
- Removing or improving background design for better UI clarity

- Adding an About Us section within the Contact Us page
- Displaying all branch locations where Shiva Textiles shops are present
- Improving overall user experience and website navigation

3.3 Out of Scope

The following items are not included in the current scope of the project:

- Online payment or checkout functionality
- User login or account creation
- Inventory management or backend ERP integration
- Order tracking or delivery management
- Mobile application development

Current Process

The current Shiva Textiles website functions primarily as an informational platform. It displays basic details such as the business name, product categories (kids wear, sarees, and innerwear), and contact information. Users can view the homepage content but do not have the ability to search for products or apply filters based on price or material. The website design includes static background elements with limited visual optimization. The Contact Us section contains only basic contact details and does not provide information about the company background or detailed branch locations. Overall, the current process offers minimal interaction and limited support for users to explore products efficiently.

Proposed Process

The proposed process enhances the existing website by introducing improved functionality and usability features. A search option will be added to allow users to quickly find products. Filter options based on cost and cloth material will help users narrow down their choices easily. The website's visual appearance will be improved by removing unnecessary background elements, creating a cleaner and more professional layout. The Contact Us page will be expanded to include an About Us section describing the company and its values. Additionally, all Shiva Textiles branch locations will be listed clearly so customers can identify nearby stores. These updates will transform the website into a more user-friendly and informative platform.

Design

Business Requirements

Req ID	Business Requirement	Priority Value	Priority Rating
BR-01	Product search functionality	1	High
BR-02	Filter products based on cost	1	High
BR-03	Filter products based on cloth material	1	High
BR-04	Display all branch locations	2	Medium
BR-05	Add About Us section in Contact page	2	Medium
BR-06	Background removal and UI improvement	3	Low

Functional requirements

Requirement ID	Priority	Function / Feature	Description	Impacted Stakeholder
FR_001	High	Website Navigation	• User should be able to navigate to the home page of the website• Website should have clear menus and links for easy navigation	User
FR_002	High	Product Search	• User should be able to search for products using keywords• Search results should display relevant products	User
FR_003	High	Filter by Cost	• User should be able to filter products based on price range• Filter should help users find products within their budget	User
FR_004	High	Filter by Cloth Material	• User should be able to filter products based on cloth material (e.g., cotton, silk, etc.)	User
FR_005	Medium	Home Page Display	• Home page should display product categories clearly• Page should be user-friendly and visually clean	User
FR_006	Medium	Background Removal	• Unnecessary background elements should be removed• Website should have a clean and professional appearance	User
FR_007	Medium	About Us Section	• About Us content should describe company	User

			background, values, and business overview	
FR_008	Medium	Branch Locations	• Contact Us page should display all branch locations• Each branch should include city name and address	User
FR_009	Low	Contact Form	• User should be able to submit enquiries using contact form• Form should collect name, email, and message	User / Admin

Non - functional Requirements

Requirement ID	Priority	Quality Attribute	Description	Impacted Stakeholder
NFR_001	High	Performance	• Website pages should load within 3–5 seconds under normal network conditions• Search and filter results should be displayed quickly	User
NFR_002	High	Usability	• Website should be easy to use and understand for all users• Navigation should be simple and intuitive	User
NFR_003	High	Availability	• Website should be accessible 24/7 except during maintenance•	User / Business

			Downtime should be minimal	
NFR_004	Medium	Reliability	• Search and filter functionalities should work correctly without errors• Website should perform consistently	User
NFR_005	Medium	Compatibility	• Website should be compatible with major browsers (Chrome, Edge, Firefox)• Should work on desktop and mobile devices	User
NFR_006	Medium	Scalability	• Website should support an increase in users and product data in the future	Business
NFR_007	Medium	Maintainability	• Website content such as branch details and About Us should be easy to update	Admin
NFR_008	Low	Security	• Contact form data should be handled securely• Website should prevent basic vulnerabilities	User / Business

Financial Statements

This section explains how the project cost is distributed across different activities and highlights the expected benefits. It also outlines the financial and operational constraints affecting the project.

Cost Component	Description	Estimated Cost (INR)
Requirement Analysis	Understanding business needs and documentation	10,000
UI/UX Design	Background removal and visual enhancements	15,000
Development	Search and filter functionality implementation	30,000
Content Update	About Us, branch details, and contact information	8,000
Testing	Functional and usability testing	7,000
Deployment & Maintenance	Hosting setup and basic maintenance	10,000
Total Estimated Cost		80,000

Category	Details
Costs	Development, design, testing, and deployment expenses
Tangible Benefits	Reduced customer queries, improved product discovery, better store visibility
Intangible Benefits	Improved brand image, higher customer satisfaction, professional online presence
Business Impact	Increased customer engagement and potential rise in store visits

Constraint Type	Description
Budget Constraint	Project must be completed within the allocated budget without additional expenses

Time Constraint	Enhancements must be delivered within the academic project timeline
Technical Constraint	Website enhancements must work within the existing platform and infrastructure
Resource Constraint	Limited availability of development and design resources
Scope Constraint	Advanced features like online payments and login systems are excluded

Schedule, Timeline &deadlines

Phase	Activity	Duration	Deliverables
Phase 1	Requirement Gathering & Analysis	Week 1 – Week 2	BRD, Stakeholder inputs
Phase 2	System & UI Design	Week 3 – Week 4	Wireframes, UI mockups
Phase 3	Development	Week 5 – Week 8	Functional website modules
Phase 4	Testing	Week 9 – Week 10	Tested & bug-free system
Phase 5	Deployment & Go-Live	Week 11	Live website
Phase 6	Post-Deployment Support	Week 12	Bug fixes, minor enhancements
